

We Have You In Stitches!

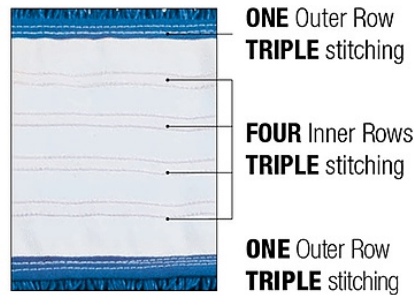

Three Ways Our Microfiber Mops Are Just Made Better

1. More Stitched Rows = 20% better surface contact.

Check out our quadruple interior rows! More stitched rows creates a more sturdy mop head and longer mopping life. This construction also provides more consistent contact with the surface.

2. More Stitching Per Row = Greater durability.

Check out our triple stitched rows. That is one of the reasons our Rapido® mop heads are guaranteed for up to 600 washes.

3. Shorter Stitch Length = Additional Strength, Longevity

FILMOP

COMPETITOR

Obviously, the illustration is not to scale, but it does point out the difference between our shorter stitches versus longer ones. All tailors will tell you, the more stitches per inch means a stronger seam.
