

Making Cloths And Squeegees Obsolete

Are you ready to toss your wadded-up cleaning cloths, drippy window cleaning process and annoying surface streaks?

If so, it's time to pick up the Brillante Surface Cleaning System from Filmop USA and find out why it is making cleaning cloths and squeegees obsolete.

The Brillante system is comprised of washable microfiber pads that are securely, yet easily attached with Velcro® to either a handheld trowel or handle-mounted pad holder.

Pads measure 12 inches by 4-½ inches or 16 inches by 4-½ inches and, when attached to the handheld trowel, they effectively clean windows, mirrors, stainless steel tables, cabinets and other flat surfaces.

The pads can also be affixed to pad holders that attach to lightweight aluminum telescopic handles or poles for cleaning hard-to-reach surfaces.

Greater Surface Coverage

The Filmop Brillante system enables you to clean a 12-inch or 16-inch path with one swipe.

Compare this with a traditional microfiber cleaning cloth that measures 16 inches by 16 inches and is typically folded into quarters for a total cleaning area of eight inches by eight inches.

This smaller cleaning area capacity translates into more labor time to completely cover the surface to be cleaned.

Consistent Surface Contact

The handheld Brillante trowel is designed to evenly distribute pressure and maintains complete surface contact for more effective cleaning.

This assures that the cleaning solution is applied as consistently as possible with less effort.

The ultra-microfiber pad composition delivers maximum microfiber power to attract and hold onto dirt, grime and cleaning solution, resulting in superior cleaning and streak-free drying — even on stainless steel and glass.

The trowel incorporates a plastic scraping edge to remove dried food or hard-to-remove residue.

The Filmop Brillante Surface Cleaning System eliminates the need to use squeegees for large interior windows or mirrors.

Squeegees involve multiple steps and materials, including a solution bucket, squeegee and a cloth for absorbing solution that drips.

The Brillante system streamlines the process and eliminates solution drippage and runoff.

Ergonomically Designed

Twists and turns while cleaning can lead to musculoskeletal disorders.

In a study conducted in Sweden, 51 percent of office cleaners experienced pain in their shoulders and hands.

The design of the Brillante handheld

trowel helps eliminate wrist strain by decreasing the amount of hand rotation and pressure needed.

At the same time, it covers more surface space to more rapidly finish the job.

Attaching the Brillante pad holder to either the aluminum handle (which telescopes up to 72 inches) or an aluminum pole (which reaches up to 30 feet in length) makes easy work of cleaning walls, ceilings and interior windows.

The swivel head either moves freely or can be locked into position; back and shoulder strain is reduced with the lightweight construction.

Filmop USA is a worldwide leader in the manufacturing of high-quality microfiber products, ergonomically-designed cleaning systems and modular house-keeping carts.

Filmop's janitorial and maintenance supply equipment solutions are designed for today's cleaning professionals and are manufactured for longevity, economy and durability. **CM**
